

Statement Splitter — Install Guide (Mac)

Version 1.0. Takes about two minutes, once.

1. Install

Open the disk image you were sent (double-click it). A window appears with the **Statement Splitter** icon and an **Applications** folder. Drag **Statement Splitter** onto **Applications**.

2. First launch (one-time warning)

The app isn't registered with Apple's developer program, so the first time you open it macOS will say it *"cannot be opened because Apple cannot check it for malicious software"*, or that it is from an unidentified developer. This is expected. To get past it:

- Open **System Settings** › **Privacy & Security**.
- Scroll down to the **Security** section. You'll see a line saying **"Statement Splitter" was blocked** with an **Open Anyway** button. Click it.
- Confirm with your Mac password or Touch ID if asked. The app opens, and from then on it opens normally.

If you don't see the Open Anyway button, right-click (or Control-click) the app in Applications, choose **Open**, then click **Open** in the dialog.

3. Using it each month

- Download the month's statement from AppFolio as usual.
- Open **Statement Splitter**, click **Choose PDF...**, and pick that file.
- Click **Split the statement**. Each property's pages are saved as one file for the month, inside a folder named for that property, in **iCloud Drive** › **Property Statements** (you can change where under step 2 in the app). The iPad sees the same folders through the Files app.
- To compare months, open a property's folder — every month sits side by side, named like **2026-08.pdf**.
